

ABSTRACT OF THE DISCLOSURE

5       A condenser lens is disposed in a position facing  
an objective lens via a specimen, a reflection mirror  
is movably disposed in the vicinity of an outermost  
part of a transmitted illuminative light path on the  
side of a transmitted illuminative light source from  
the condenser lens, and a laser beam output from a  
laser oscillation unit is reflected by the reflection  
mirror and is incident upon the condenser lens.
